Implementation Strategies for LEED 2009 Green Buildings Operations & Maintenance Program

a BEP collaboration of ...

KC IFMA,
ASHRAE,
BOMA &
USGBC

BUILT ENVIRONMENT PARTNERS

This course is not simply an overview or introductory course about the LEED for Green Buildings Operations and Maintenance® (LEED O&M) program but an in-depth probe into the system that will leave participants with many ideas for immediate implementation whether they choose to enter the LEED O&M program or not. It will also provide a roadmap of the certification process for those who are considering the program and want to better understand the costs, the timeline, the implementation steps, the work involved and the anticipated benefits.

Three Learning Objectives:

- Participants will learn the benefits, costs and implementation strategies for the LEED O&M program so that they will be able to return to their facilities with ideas on how to implement at least one new strategy that will improve their organization's operational performance.
- When an organization is ready to measure and implement more strategies, participants will have a roadmap of the process of implementing and seeking certification for LEED O&M best practices.
- Each participant will have an opportunity to share their experiences and learn from others who are seeking new ways to measure and realize operational performance for their organizations.

The instructor request that participants bring real life situations or questions from the field so that the group will have the opportunity to collaborate and apply concepts to relevant challenges of the day.

Date: November 17th, 2009

Time: 8:30am – 5:00pm

NEW Cost: Thanks to the local support and generosity of our sponsors Registration is now reduced to \$150 until 11/10, after that the cost is \$200. Includes breakfast pastries & coffee, breaks, lunch and materials.
