

IFMA's Seamless Guide to Sustainability

Presented by Facility Engineering Associates, P.C.

Sustainability in the workplace is no longer an optional trend—it is becoming a mandatory practice for facility managers worldwide. Many global, financial and environmental factors are contributing to the ultimate need for a complete shift to sustainability in the FM industry. That's where we come in...

IFMA's new course, "Sustainable FM: A Practitioner's Guide to Greening Your Facility," is now the most in-demand session offered by IFMA's education department. This valuable program will assist you in leading sustainability efforts in taking practical actions to justify programs for your organization.

The sustainability courses have been filling up quickly— but you still have time to register for the classes listed below! Make your peers "green" with envy by snagging a spot at one of IFMA's most anticipated courses of the year.

Sustainable FM: A Practitioner's Guide to Greening Your Facility | 1.5 CEUs | 15 CFM Maintenance Points

DAY 1

- Introduction and self-assessment
- History/legislation/benefits
- Sustainability assessment of organization and FM department
- Metrics, reporting and green claims
- Greening your FM operations
